

# **Big Depot Hurricane Planning Game**

**Ozlem Ergun, Gonca Karakus, Pinar Keskinocak, Julie Swann,  
Monica Villarreal\***

*Supply Chain and Logistics Institute Humanitarian Logistics Research  
Center H. Milton Stewart School of Industrial and Systems Engineering*

# Game Set-up

- 10% in-class game
- **March 13 Wednesday 17:30-20:30 in BZ08**
- Play it with your project teams
- Every team must have at least one computer
- Do not forget to bring USB
- Peer evaluation form

# Game Set-up

- Detailed instructions for this exercise will be sent
- The following MS Excel files should be ready to be opened on the computer:
  - Procurement Decision Tool
  - Allocation Decision Tool
  - Big Depot Answer Sheet

Download before the game!!  
MacBook is not suggested

# Introduction to the problem

- Big Depot is a retailer of furniture and general home improvement products
- The GOAL:  
ensure that the necessary materials are delivered to their stores in the right amount and at the right time during the hurricane period.

# Hurricane

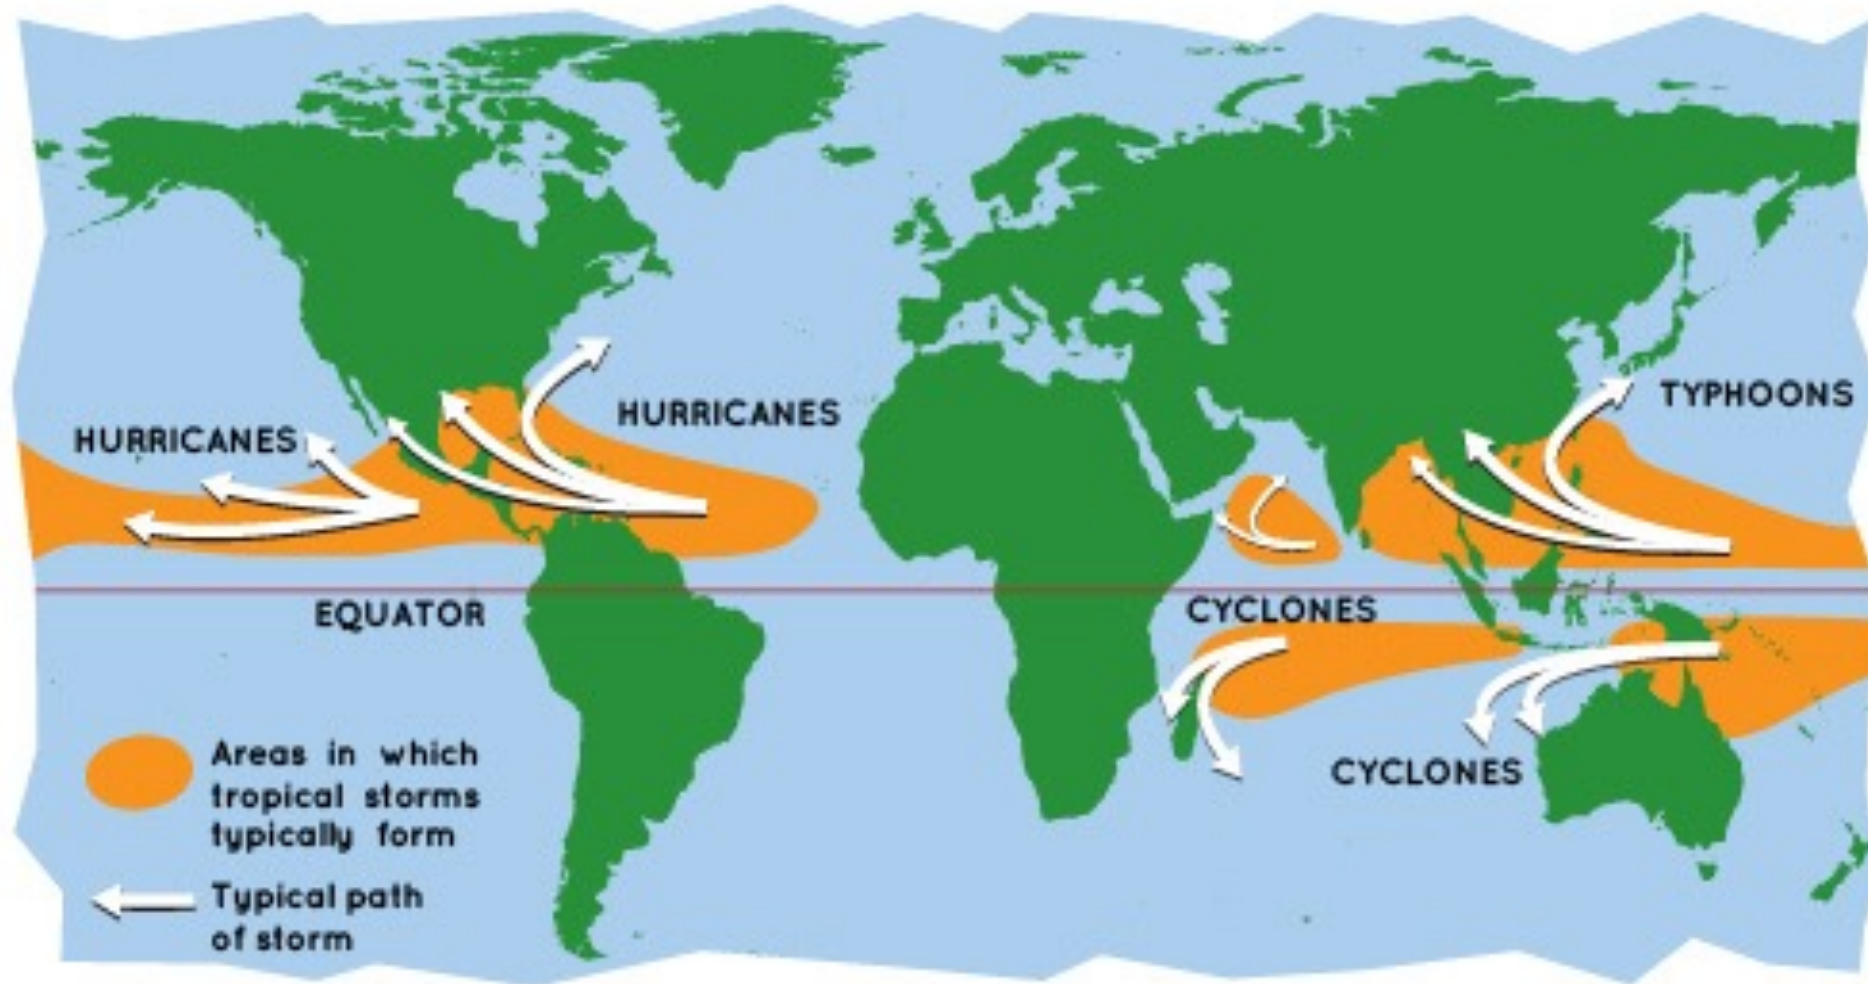

Sudden onset

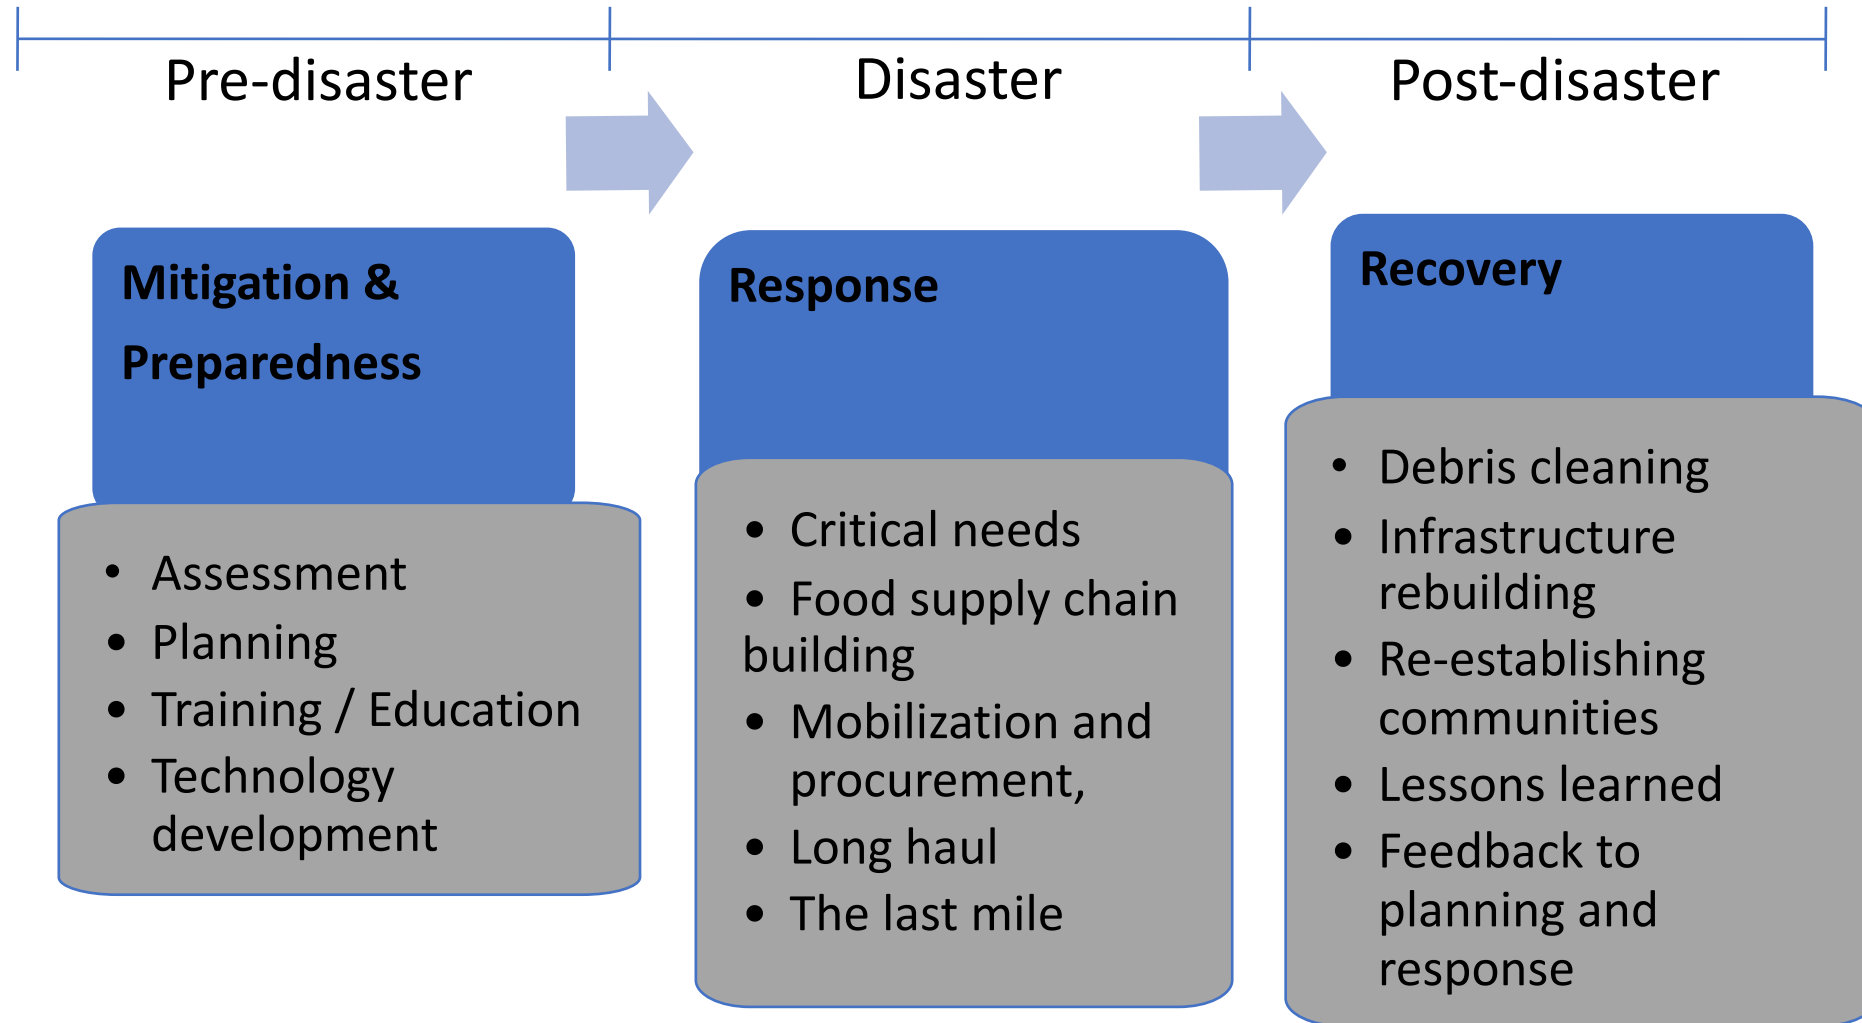

Predictable location

Predictable timing

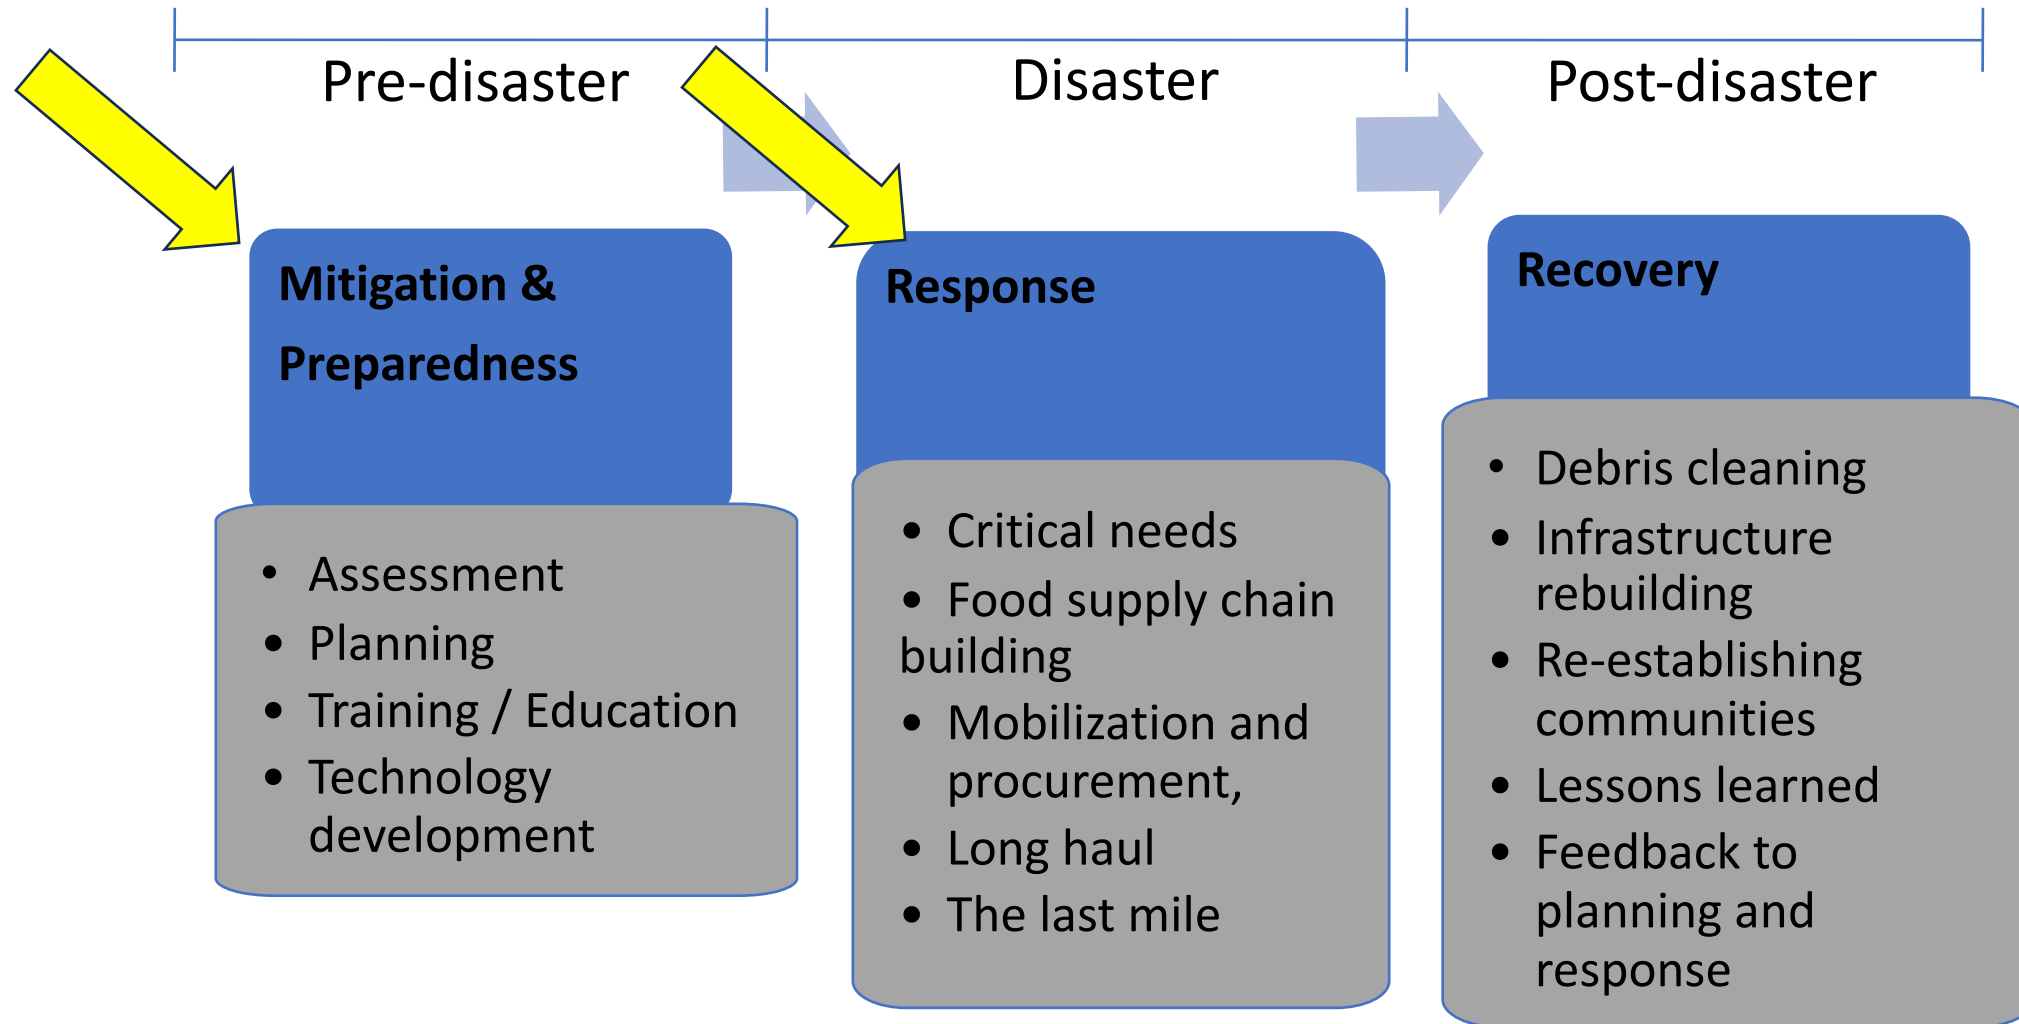

# Hurricane

# Disaster Timeline

# Disaster Timeline

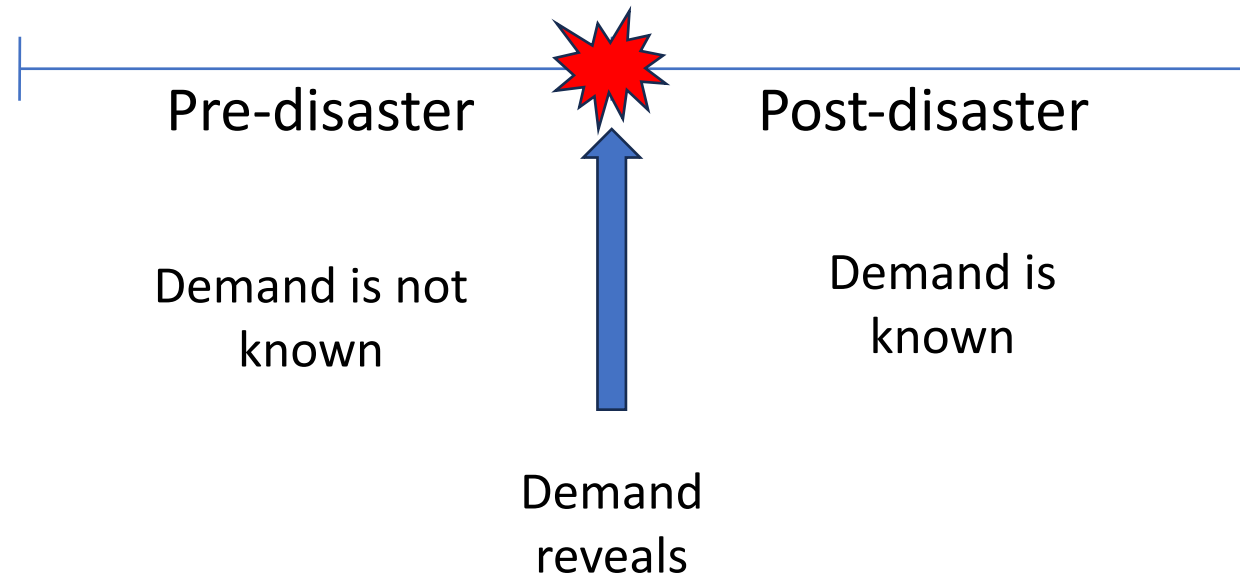

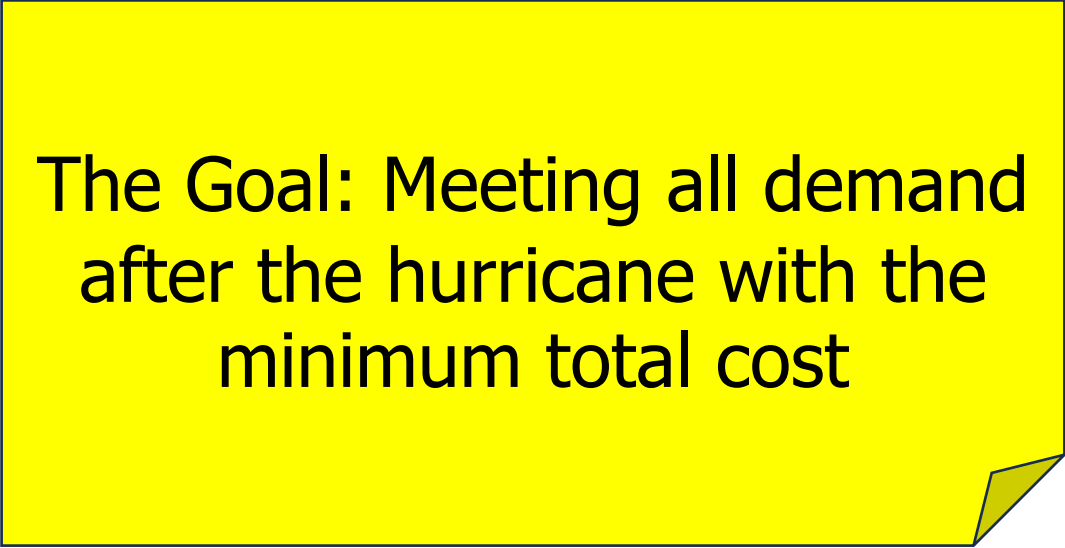

- 6 Product types: Cover set, Lighting set, Generator, Bottled water, Recovery set, Cleanup set
- 4 Regional Distribution Centers (DCs)

- 6 Product types: Cover set, Lighting set, Generator, Bottled water, Recovery set, Cleanup set
- 4 Regional Distribution Centers (DCs)

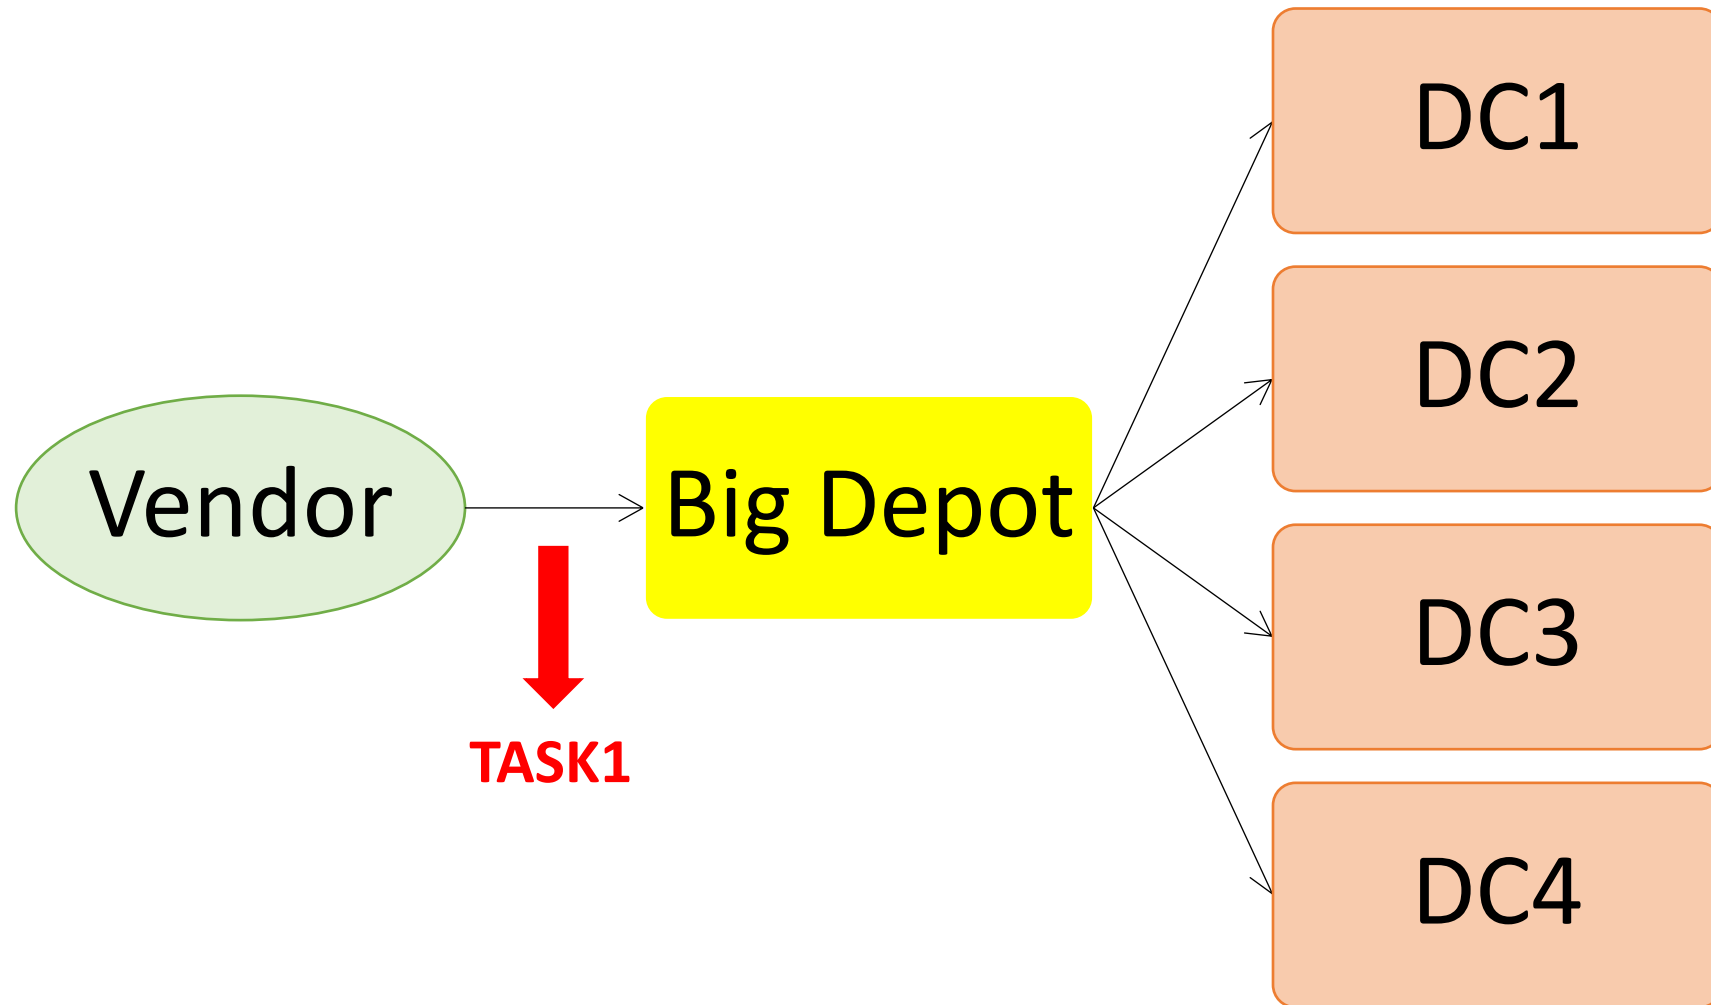

The Goal: Meeting all demand  
after the hurricane with the  
minimum total cost

Before the hurricane...

Before the hurricane...

# Procurement Decisions

- Vendors offer discounted prices for pre-disaster purchasing
  - Reservation cost or advance purchasing cost
- Limited budget for the advance orders

# TASK-1 PURCHASING DECISIONS

- Demand is uncertain
  - You will have some statistical information on the total demand for each product type
- It is cheaper to buy before the hurricane
- There is a budget
- If you buy less product than the demand, you can buy more after the hurricane. But it will become more expensive
- If you buy more than the demand there is no salvage value

Before the hurricane...

# TASK-2 ALLOCATION DECISIONS

- You need to allocate the purchased items among the DCs
- Demand is still uncertain.
- Scenarios are provided for each hurricane path
  - Probability of each scenario
  - Demand distribution for each scenario
- If the stores' demand exceeds the regional warehouse (DC) inventory, the stores meet the unfulfilled demand paying higher prices to vendors for the expedited delivery of the required products (**expedited cost**)

# TASK-2 ALLOCATION DECISIONS

Procurement cost = Reservation cost + Expedited cost

# TASK-2 ALLOCATION DECISIONS

Procurement cost = Reservation cost + Expedited cost

Budget

No Budget

# TASK-3 PURCHASING AND ALLOCATION DECISION WITH TOOLS

- Two decision tools were developed:
  - Procurement Decision Tool
  - Allocation Decision Tool
  - Enable macros when opening the files
- These tools compute:
  - Expected costs of given decisions
  - Cost of given decisions, given a specific scenario
- Now, evaluate your proposed decisions and improve them using these tools.

# Procurement Decision Tool

**Merchandise Procurement Problem**

**Instructions:**  
 Information about prices and demand distribution for each item group is given below. Available merchandise reservation budget is also given. Task: Fill the **green cells** with the number of units to reserve for each group.  
**NOT:** If the budget is violated a **message in red** will appear. Also, the expected total cost will be shown for the chosen quantities to reserve. A demand scenario could be entered in the **yellow cells** and the total cost will be calculated and shown as well.

**Data**

|                                     | Cover Set | Lightning Set | Generators | Bottled Water | Recovery Set | Cleanup Set |
|-------------------------------------|-----------|---------------|------------|---------------|--------------|-------------|
| <b>Prices (\$/unit)</b>             |           |               |            |               |              |             |
| Discounted Price, <i>ci</i>         | \$60.00   | \$15.00       | \$100.00   | \$3.00        | \$25.00      | \$10.00     |
| <i>Expected % increase in price</i> | .90%      | .150%         | .200%      | .20%          | .50%         | .30%        |
| Expedited Price, <i>pi</i>          | \$114.00  | \$37.50       | \$300.00   | \$3.60        | \$37.50      | \$13.00     |
| <b>Total Demand (units)</b>         |           |               |            |               |              |             |
| Mean                                | 4,500     | 14,000        | 2,500      | 35,000        | 5,000        | 8,000       |
| 95% Percentile                      | 8,612     | 19,757        | 4,967      | 46,514        | 9,935        | 14,908      |
| 5% Percentile                       | 388       | 8,243         | 33         | 23,486        | 65           | 1,092       |
| Std Dev                             | 2,500     | 3,500         | 1,500      | 7,000         | 3,000        | 4,200       |

**Reservation Budget: \$950,000**

**Design:**

|                                    | Reserved units | Reservation Cost (\$) |
|------------------------------------|----------------|-----------------------|
| Cover Set                          | 5,000          | \$300,000             |
| Lightning Set                      | 13,000         | \$195,000             |
| Generators                         | 2,225          | \$222,500             |
| Bottled Water                      | 5,000          | \$15,000              |
| Recovery Set                       | 4,500          | \$112,500             |
| Cleanup Set                        | 10,500         | \$105,000             |
| <b>Total Reservation Cost (\$)</b> |                | <b>\$950,000</b>      |

**Expected Total Cost (\$)**

|                                 |                    |
|---------------------------------|--------------------|
| <b>Expected Total Cost (\$)</b> | <b>\$1,506,641</b> |
| Expected Reservation Cost (\$)  | \$950,000          |
| Expected Expedited Cost (\$)    | \$556,641          |

**Demand scenario:**

|                                          | Demand (units) | Total Cost (\$)    |
|------------------------------------------|----------------|--------------------|
| Cover Set                                | 4,557          | \$300,000          |
| Lightning Set                            | 14,080         | \$235,493          |
| Generators                               | 2,534          | \$315,261          |
| Bottled Water                            | 35,160         | \$123,575          |
| Recovery Set                             | 5,065          | \$133,815          |
| Cleanup Set                              | 8,096          | \$105,000          |
| <b>Demand scenario Total Cost (\$)</b>   |                | <b>\$1,213,144</b> |
| Demand scenario Reservation Cost         |                | \$950,000          |
| Demand scenario Expedited Cost (\$)      |                | \$263,144          |
| Savings due to advanced reservation (\$) |                | \$1,016,494        |

General Instructions

Expected TOTAL procurement cost

YOUR SOLUTION for advance purchasing

The budget

You can choose to enter a specific demand scenario

# Allocation Decision Tool

**Instructions:**  
 Please fill out the spreadsheet for the demand distribution across DCs and a probability of occurrence for each scenario. Note: The spreadsheet asks usage DCs are given as well. Enter your demand quantities for each item type in the **Item Type** - **Peak** - **Reserved** quantities for each item type to be distributed using the DCs. Fill the percentage of the demand quantity to allocate to each DC using the **Allocated at DC**.  
 NOTE: 100% of the demand quantity has to be allocated using the DCs, and if it is not **message in red** will appear. Also, the reported transportation cost has to be re-allocating inventory from the initial scenario is provided and shown. The cost for a specific scenario will be reported in the **Re-allocation Cost** box.

**Item Type**

| Item Type | Case Sol | Lighting Sol | Generators | Bullied Water | Emergency Sol | Cleanup Sol |
|-----------|----------|--------------|------------|---------------|---------------|-------------|
| Units     | 5,000    | 10,000       | 2,225      | 5,000         | 4,500         | 10,000      |

**Allocated at DC**

| DC | Case Sol | Lighting Sol | Generators | Bullied Water | Emergency Sol | Cleanup Sol |
|----|----------|--------------|------------|---------------|---------------|-------------|
| C1 | 20%      | 20%          | 20%        | 20%           | 20%           | 20%         |
| C2 | 20%      | 20%          | 20%        | 20%           | 20%           | 20%         |
| C3 | 20%      | 20%          | 20%        | 20%           | 20%           | 20%         |
| C4 | 20%      | 20%          | 20%        | 20%           | 20%           | 20%         |

**Expected Transportation Cost due to Re-allocation (\$):** \$16,428

**Re-allocation Cost (\$):** \$7,643

**Scenario:** 1

General Instructions

YOUR SOLUTION for inventory allocation

Enter solution from procurement problem

Expected TOTAL re-allocating cost

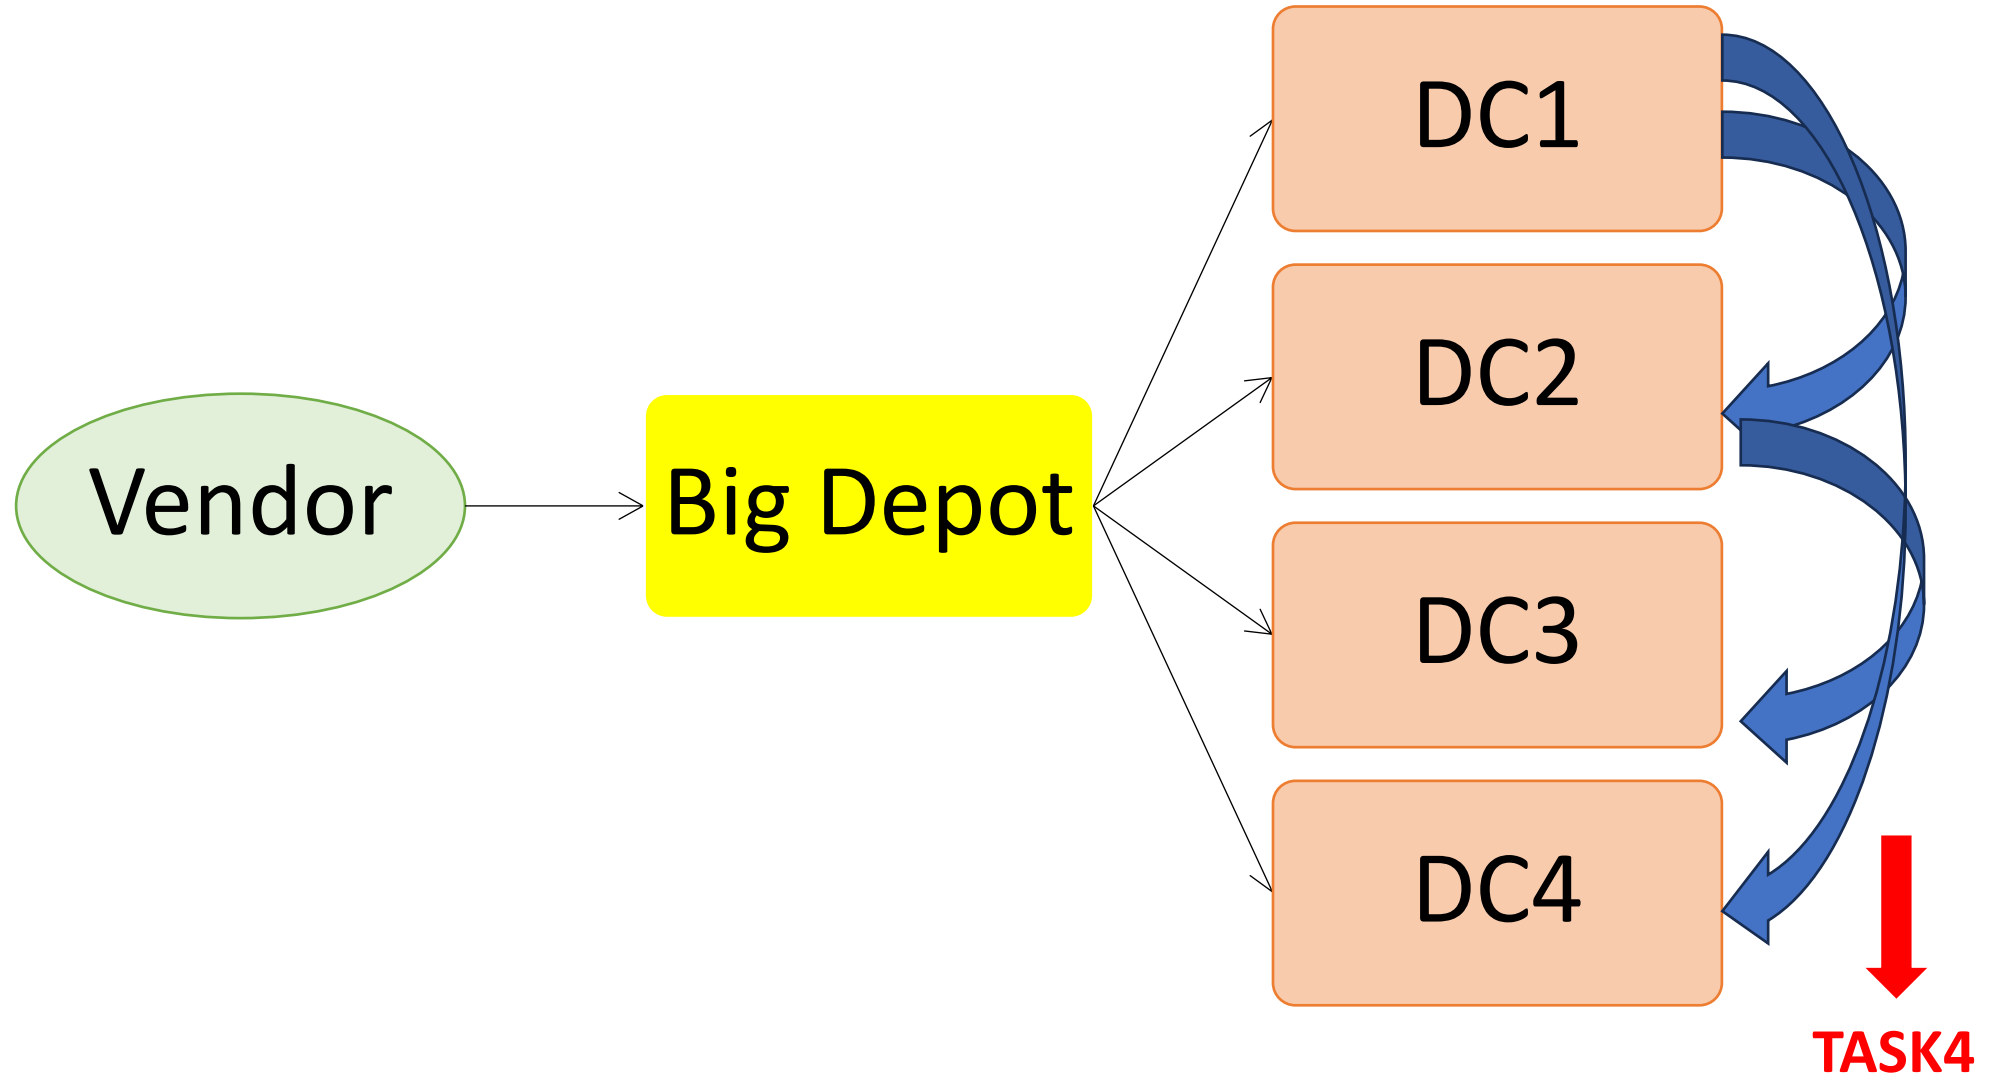

Message in red: %'s should sum 100%

You can choose a specific path scenario

# Revealed Demand Information

- The hurricane hit, now we will share the real demand for each DC

After the hurricane...

# TASK-4 ALLOCATION BTW DCs

- You will determine the inventory quantities to be re-allocated given your last allocation decision by using the tools again
- Re-allocate reserved inventory proportionally to the demand of the region

# What does this mean?

These inventory allocation decisions were made initially, given de current information

|      | Initial Inventory | Initial Distribution |
|------|-------------------|----------------------|
| DC 1 | 3,000             | 30%                  |
| DC 2 | 4,000             | 40%                  |
| DC 3 | 1,000             | 10%                  |
| DC 4 | 2,000             | 20%                  |

New information is given!

| Demand Location |
|-----------------|
| 10%             |
| 30%             |
| 0%              |
| 60%             |

Need to re-allocate 4,000 units! \$\$\$!

|      | Extra         | Deficit       | Final Inventory | Required Distribution (given Demand Location) |
|------|---------------|---------------|-----------------|-----------------------------------------------|
| DC 1 | -2,000        |               | 1,000           | 10%                                           |
| DC 2 | -1,000        |               | 3,000           | 30%                                           |
| DC 3 | -1,000        |               | 0               | 0%                                            |
| DC 4 |               | +4,000        | 6,000           | 60%                                           |
|      | <b>-4,000</b> | <b>+4,000</b> |                 |                                               |
